| Warning: the "Use lab data" switch on the rubber settings page changes the scale of the values (at least the Bounce), so the value is only valid together with the LBD switch! And some values were collected with the LBD unknown.. If bounce is bigger than 89 it was LBD on as 89 is the max otherwise. |                     |                   |                    |                     |                   |                    |                                |                                |                           |            |                    |                |                      |     |     |                                                 |

[1] 100 max with LBD on, 89 max with LBD off

[2] 82 max; changing the spin value doesn't do much according to several players

[3] 1.2 max, was limited at some point to 1.2 to avoid unrealistic shots, so bigger values are old

[4] Same as forehand if not specified

[5] Same as forehand if not specified

[6] The eleven version the data was collected on, in case the values change

[7] Lab data switch in rubbers settings
